

Camouflaged Chameleons

Objective: To explore and simulate camouflage in animals

Here's what you'll need to conduct this experiment:

- Chameleon pattern or MAKE YOUR OWN 😊
- Colored pencils, markers or crayons
- Family member in your house or a friend on FaceTime

What You Do:

1. Think about the three types of camouflage we discussed and design a chameleon so that it can be camouflaged somewhere in your room or home.
2. Make the chameleon as invisible as possible.
3. Cut out the chameleon from the paper.
4. Attach the chameleon to it's hiding spot.
5. Have someone search the room for your chameleon.
6. Time them! How long did it take.
7. Share your stories with me about the search!
